

Gas network pricing schedule

Version: 2027.1

Effective: 1 October 2026

Module 15: Vector's Agreement for Use of Networks

CONTENTS

1.1	General terms.....	3
1.1.1	Selection of price category	3
1.1.2	Provision of consumption information	3
1.1.3	Calculation of scaled and variable charges.....	3
1.2	Gas Network Loss Factors	4
1.2.1	Loss factors	4
	Price schedule:.....	5
	Appendix: Network-Related Services Charges.....	7

1.1 GENERAL TERMS

For full details of the conditions for use of Vector's gas network, please refer to the relevant gas distribution contract between the retailer and Vector, being Vector's Agreement for Use of Networks or Use of System Agreement for Gas Network ("**Vector's Gas Distribution Agreement**").

- (a) All defined terms in this schedule have the same meanings as those terms in Vector's Gas Distribution Agreement. In addition:
 - (i) price category has the same meaning as price plan and End-Consumer Load Group;
 - (ii) consumer has the same meaning as End-Consumer or Customer, as applicable;
 - (iii) consumer has the same meaning as ICP;
 - (iv) connection has the same meaning as Point of Connection;
 - (v) Vector has the same meaning as the Distributor;
 - (vi) Vector's gas network has the same meaning as the Northern Regional Gas Network or Network, as applicable.
- (b) Times stated in this schedule are New Zealand daylight time unless otherwise specified.

1.1.1 Selection of price category

- (a) Vector will set the price category for all consumers based on the criteria set out in this pricing schedule.

1.1.2 Provision of consumption information

- (a) The retailer will provide Vector with consumption data for each consumer and for each code as prescribed in this price schedule.
- (b) Where more than one meter is in use at a connection, but a single variable distribution charge applies, the retailer must aggregate consumption data before forwarding to Vector.
- (c) For residential price categories, where a consumer has a half hourly meter, the retailer must aggregate consumption data before forwarding to Vector.

1.1.3 Calculation of scaled and variable charges

- (a) Where the sum of gas consumption for all consumers on Vector's gas network (after adjustments for estimated gas consumption and losses) does not reconcile with the total gas injected into the network each month, Vector may factor up or down the loss adjusted gas consumption for each ICP identified by Vector so that the total gas consumption of all consumers reconciles with the total gas injected into the network.
- (b) Vector will use the gas consumption for each consumer derived from this calculation as the basis for calculating variable charges.
- (c) Vector sets out this process in further detail in its Use of System Agreement for Gas Network, which is published on Vector's website.

1.2 GAS NETWORK LOSS FACTORS

Vector may review and amend losses and loss factors from time to time, on reasonable notice to the retailer, to ensure that they reflect unaccounted for gas on Vector's gas network.

1.2.1 Loss factors

For the purpose of calculating distribution charges, unless otherwise specified, retailers do not need to apply the loss factors detailed in this section to the measured or calculated gas conveyed to connections.

- (a) The following table shows the distribution loss percentage and loss factor for each loss factor code.

Loss factor code	Distribution losses with respect to the gate station meter	Distribution loss factors with respect to the consumer meter
VEAG1	1.26%	1.0127

- (b) The following table shows the loss factor codes for each price category.

Price category	Loss factor code
GA0R	VEAG1
GA01	VEAG1
GA02	VEAG1
GA03	VEAG1
GA04	VEAG1
GA05	VEAG1

PRICE SCHEDULE:

Vector's gas distribution network

Applicable from 1 October 2026

This document describes Vector's standard gas distribution prices which cover the costs of distributing gas to consumers connected to Vector's gas distribution network. Vector offers six price categories for its gas distribution network consumers depending on the consumer's connection size and their connection type.

Consumer group	Description	Price category	Load size (scm/h)	Fixed daily (\$/day)		Variable volumetric (\$/kWh)	
Mass market	Residential	GA0R		GA0R-FIXD	1.1176	GA0R-24UC	-
	General	GA01	≤ 10	GA01-FIXD	1.9429	GA01-24UC	0.009325
Commercial	Small commercial	GA02	> 10 and ≤ 40	GA02-FIXD	3.5862	GA02-24UC	0.009695
	Large commercial	GA03	> 40 and ≤ 200	GA03-FIXD	16.43	GA03-24UC	0.007098
Industrial	Small industrial	GA04	> 200	GA04-FIXD	66.7010	GA04-24UC	0.004232
	Large industrial	GA05	> 200	GA05-FIXD	401.9130	GA05-24UC	0.001257

Fixed daily prices (-FIXD) apply to the number of days each consumer is connected to Vector's gas distribution network. Variable volumetric prices (-24UC) apply to all gas distributed to each consumer. All prices are exclusive of GST.

Price category information

The **GA0R** price category applies to all residential consumers. A residential consumer is where the consumer's metered point of connection is for a home, not normally used for any business activity.

The **GA01 - GA05** price categories apply to non-residential consumers. The relevant price category is determined based on the consumers' load size.

Load size for non-residential consumers is measured in standard cubic metres per hour (scm/h) and is based on either the installed equipment or meter capacity.

Consumers with a load size greater than 200scm/h may choose between the **GA04** and **GA05** price categories. Consumers may not move between these price categories more than once in any 12-month period.

For further information

Consumers should contact their gas retailer to discuss how Vector's distribution prices are applied to consumer bills.

Network map

The map below shows the approximate area covered by Vector's gas distribution network.

Extent of prices

Vector's distribution standard prices published in this schedule relate to the cost of owning, operating and maintaining the network as it currently exists but do not include amongst other things, energy charges for the gas consumer's use, transmission charges, metering charges, the cost of reading meters and the cost of consumer fittings or appliances.

For Vector to supply any new or changed distribution service, including but not limited to; changes to security or service levels, the connection to the network of additional connections and the modification, relocation or removal of current connections, Vector may apply non-standard prices other than those outlined in this schedule on a case-by-case basis.

The appendix to this schedule sets out Vector's Network-Related Service Charges.

Should Vector forecast a potential price breach under the regulated price path, then Vector may provide a refund or rebate of gas distribution charges directly to the gas retailer(s) to avoid such a breach.

APPENDIX: NETWORK-RELATED SERVICES CHARGES

In addition to the distribution charges listed in this schedule, Vector also charges for additional services such as reconciliation/allocation services, disconnection and reconnection services. The table below outlines some of these additional services and their charges. Unless stated otherwise, Vector will invoice all network-related service charges below directly to the retailer and not to the consumer.

Description of each Network-Related Service Charge	Charge (exc. GST)
Site visit fee The retailer must pay this fee for any site visit that the retailer requests from Vector. Examples of site visits include, but are not limited to, non-network call outs, temporary disconnection/reconnection, urgent after-hours disconnection, and vacant site disconnection/reconnection.	Price on Application
Late, incorrect or incomplete consumption data fee This fee applies where consumption data does not comply with the requirements of Vector's Gas Distribution Agreement. Vector will charge this fee based on the actual time a billing analyst spends reviewing, correcting, validating and reconciling the information and/or system time required to bill or rebill the corrected or amended data.	\$110 per hour

Vector will charge the retailer for all non-network fault work, and retailer or consumer services not listed in the table above, on a time and materials basis at market rates.
